

# Ultherapy: What to expect after treatment

Because everyone's skin is different, results will vary.

These are possible effects

- Minor swelling
- Slight tenderness to the touch
- Tingling, numbness
- Slight plumping of fine lines
- Redness
- Minor bruising
- Minor swelling
- 

There is usually some mild lifting and tightening within the first month. That is just the beginning. The deeper, more structured collagen takes 3-6 months to build.

The changes can occur very subtly and slowly over time. It is important to have "before" pictures, "3 month pictures", and "6 month pictures" for you to see the change.

Please schedule your 3 month and 6 month appointment for pictures before you leave after your procedure.
